Area Sales Manager

Dear Sir,

With ref to your mail dated 21.05.2012 for the feedback on the use of 'Ramco Plastering Compound' in our Residential project 'Metropolis' at Maraimalai Nagar.

We have used Ramco plastering compound extensively for masonry & plastering works in our above referred project consisting of 420 dwelling units and 16 independent villas.

Advantages experienced in application of the product are enumerated as follows.

1. Workability was found good in masonry & plastering works.
2. We have found less hairline crack in plastering as compared to the surface plastered.
3. Handling of big is easier since the weight is 40 Kg.
4. Presence of hydrated lime goes well with bonding.
5. Consumption of cement content appears to be same for 40Kg bag as compared to regular 50Kg OPC/PPC bag.
6. Cost of the product is less compared to OPC/PPC application.

In view of the above advantages, we recommend use of 'Ramco Plastering Compound' for masonry work in construction projects.

Thanking you,

Yours faithfully,
For Akshaya Pvt Ltd,

V RAVI
Vice President (Projects)
